

SNAPS FAQ

SNAPS Project FAQ (Frequently Asked Questions)

1. What is SNAPS? Answer: SNAPS stands for "SNA/NFV Application development Platform and Stack". This project seeks to develop baseline OpenStack NFV installations and configurations tailored to meet the needs of CableLabs' member community for the purpose of accelerating or validating individual operators' SDN/NFV platform work. These configurations are also structured to provide a platform where Virtual Network Functions can be installed and validated for both function and performance.
2. Will SNAPS environments be available for lab testing by other organizations? Answer: The SNAPS platform will be available vendor funded as a OPNFV interoperability lab in CableLabs' Kyrio subsidiary for contract-based testing of VNFs and related projects.
3. FAQ #3:
