

# Nightly Testing Strategy

These are regression tests.

Two scripts are proposed: The first, the QA approach, is the traditional unattended, execution of all scripts and archiving of results. The Dev approach is for one-off testing with script selection and archiving the results as options.

## QA Approach

Testlink is the test manager. It organizes the scripts, runs the tests and archives the results.

## Dev Approach

Ant is the test manager. Ant task run the tests and optionally archive the results. No connection to the TestLink server is needed.

## Phase 1 Scripts

For Phase 1, we expect to have the following test cases from the EarlyDropDemoUseCases spreadsheet scripted and run automatically on a nightly basis:

1. SimpleRecording - 10, 20, 30, 40
2. SimpleLiveStream -10, 20, 30
3. SimpleTrick - 10, 20, 30, 40, 50
4. LiveStreamingTrick - 10, 50
